Virtual worlds have become very popular over the last few years, even more so with the popularity of the Oculus Rift virtual reality headset. They have become the standard for virtual gaming, although more than a few users do not wish to immerse themselves in the virtual. Yet, there is also a growing number of gamers who do wish to enjoy their favorite games in a more immersive fashion. Not only does the Oculus Rift VR headset allow gamers to move about in the virtual world and view the world through their eyes, but it also comes with built-in hardware that allows one to use controllers to interact with the world. The Microsoft Kinect is one of the most popular devices for video games. The device also supports social networks, allowing users to chat with others in the virtual world. In fact, the application allows multiple players to be involved in the same virtual world, using their own controllers and headsets. CtrlAltStudio Viewer contains a program launcher that allows users to select the main program they wish to use, and then launch it. This includes programs such as UFSGrid, AviWorlds, and Second Life. There are also a number of settings available for the Oculus Rift headset, including display colors, render quality, resolutions, as well as VR and XR settings.
