What's New In Dump Generator?

Dump generator is an easy file generator. It creates files with random or chosen char. Dump

generator can be used by developers who want to increase their package to better impress customers of their software or to make jokes. It can be used by command line or simply by running it. You have to write the target file size (kilobytes), then choose the kind of generation (it is suggested the fast process) and the target filename (including the path!). A message will notice you about the correct generation. I.e: Open "cmd" and - in the same folder of the dumpgen.exe file - execute this command: dumpgen.exe Example: dumpgen.exe 1000 50 file.txt will create a 50 kB file with random char, named "file.txt" in the same folder. For more details read the comments of this topic and, in particular, the "Getting started" topic, please visit our website: www.dumpgen.com.

Version 1.1.3 Released! On 24.08.2014, Dump Generator v1.1.3 has been released, and it has been completely redesigned. The following improvements have been added: A new and improved user interface. A tooltip with a "Tick" on mouse over to choose the generation kind. The size of the output file can be set directly from the user interface. Customizable font selection. A new documentation. Added the command line version to generate only a single output file. Reworked the thread handling to keep the overall performance, whilst it is running. Added the "FAST" generation kind. Added the option to set the data file separator, allowing to make the output files more stable. Reworked the algorithm to generate random data. Updated the license, which is now LGPL 2.1. Added the option to generate files with random color (fixed too fast). Updated the "Readme" file (added the link to the manual). Added the option to set the progress bar color. All this in just under 100 KB of size. Dump generator is not only a file generator, but it has another application:Q: Accessing a function declared in a template to access template data Consider the following: `#include #include template void function(T* t) { std::cout a class MyClass { typedef std::`

System Requirements:

Minimum: OS: Windows 7 / 8 / 8.1 / 10 (64-bit) Processor: Intel Core i3-530 or AMD equivalent or better Memory: 4 GB RAM Graphics: Video card with a DirectX 9, 10 or 11 API and 256 MB of video memory. DirectX: Version 9.0c Hard Disk: 15 GB available space Additional Notes: Windows 7 and later versions of Windows will be used in this test. The OS can be any version of Windows, such
