The much-anticipated upgrade to Lightroom 5 is here. A desktop application that has been the top choice for many photographers for years, Lightroom 5 extends its functionality and allows photo professionals to trim, organize, enhance and share their photos via the web. The standard version of the popular image editing software, Adobe Photoshop Elements, costs \$89, but is usually worth every penny. With a growing number of free and inexpensive mobile apps to crop, organize, add effects and even create professional prints, Photoshop Elements is surely losing ground to its online competitors, but that doesn't mean it's going to disappear, of course. What's New:

- **Selectiv.** This tool lets you turn portions of an image into sharable Live Photos.
- Refined workflow - Flow, Slideshow or all three. (!)
- Live filters preview
- Improved in-app camera control
- Improved preview accuracy for web, iOS and archived files

While it's important to stay on top of updates and changes in Photoshop and Lightroom, the purpose of my in-depth reviews is ultimately audience-focused; are they worth the money, time and effort invested in downloading and installing the software? This review isn't going to focus on many of the other features available in Photoshop and Lightroom, but on the ones that are most relevant to my readers. I arrived just in time to capture a few shots of the Google I/O 2017 Keynote (Amusingly, Google sent out free coasters with everyone's Keynote photos . Wonder what Google did so special for their Keynote this year).

In general, you'll need to be familiar with the use of computers, word processing, and graphics applications in order to take full advantage of Photoshop. But you don't need to know much about Photoshop to use Lightroom. The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web. (If you prefer watching over reading, this article is also available as a video.) **It's fast** Although there is no doubt that web browsers today are faster than when Photoshop was first released in 1987, that doesn't mean browser sizes should change as a trade-off. Support for Adobe Photoshop on the web has been focused on keeping the fast, highly performant desktop experience. On a desktop this works because most web designers and developers have access to powerful desktops, where they can download and install Photoshop and use it on their system. (In fact, several years ago Photoshop was the only web-based application that was accessible outside of the desktop browser.) For web users on desktop, Photoshop already works just as it does on the desktop. For web users on mobile and subsequently on tablets, however, browser sizes have gotten bigger over time. This means all too often, web designers and developers must work around the limitations that browser sizes impose on the Photoshop experience. Furthermore, even when using a capable device like an iPad, there are many different use cases that are not entirely possible in a web browser. Additionally, many mobile phones have lower screen resolutions, so it's often more challenging to view an image at a size that can be easily viewed. For those reasons, Adobe has chosen to prioritize the Photoshop experience when it comes to web browsers.
